Warpstock 2012 Sessions

Session Title / Presenter	Notes
Virtualization Chuck McKinnis mckinnis@sandia.net	Hardware continues to advance, and it is becoming harder and harder to keep eCS up-to-date in support of these changes. Running eCS under Windows and/or Linux virtual support is becoming more and more viable as an alternative. This overview and update on virtualization will look at the current state of virtualization.
Wireless Networking Lewis Rosenthal lgrosenthal@2rosenthals.com	This session will deal with the recent updates to the WPA Supplicant port available for eCS and OS/2, including how to update the older build included with XWLAN, running the supplicant from XWLAN, the command line, or from the Qt GUI, as well as interpreting some of the log file to determine what might not be working quite right.
Network troubleshooting tools workshop Lewis Rosenthal lgrosenthal@2rosenthals.com	
Using RPM/YUM Neil Waldhauer neil@blondeguy.com	Many new software products for eComStation use RPM/YUM for distribution and installation. This presentation shows how to get started and use RPM/YUM.
OpenOffice workshop John W. Edwards jedwards@sentex.net	John will provide assistance on OpenOffice. Bring questions on any aspect of OpenOffice on eCS.
How to install / use Gimp Stuart Updike stuupdike@mindspring.com	Stuart Updike will walk you through the installation and some elementary operations. GIMP is the GNU Image Manipulation Program. It is a freely distributed piece of software for such tasks as photo retouching, image composition and image authoring. More information about Gimp can be found at www.gimp.org. There is an OS/2 compatible version available, but it requires an X11 server to provide display functions. There are several different ReadMe files with conflicting or incomplete information.
Demo of new Apps Eugene Gorbunoff eg@ecomstation.ru	withdrawn

Session Title / Presenter	Notes
User Interface improvements Eugene Gorbunoff eg@ecomstation.ru	withdrawn
From Berners-Lee to Webkit; an OS/2 View of the Web Steve Wendt os2warp@att.net	OS/2 browser expert Mike Kaply gave a presentation on Warpzilla at Warpstock 2005. While no one knows the IBM side of that history better than Mike, we will take a look at some of the non-IBM history, as well as what has happened in the years since then. We will explore some of the recent developments in the browser space, and the current and future state of browsers on our platform.
eComStation Roderick Klein RWKlein@mensys.nl	Comments on the state of the operating system (via Skype)
Troubleshooting eComStation Steven Levine steve53@earthlink.net	
ACPI Project for eComStation David Azarewicz david@88watts.net	This presentation will give you an understanding of the big picture as related to the ACPI PSD and related software modules. You will learn what is inside the PSD, how it works, and what it can and cannot do. Also covered are some of the tools for accessing ACPI from applications as well as advice on handling some of the common issues that people have when using the ACPI Project software.
